

DYAS[®]

QUALITY IN ALL LAYERS SINCE 1930

DYAS work desk

the initial semiproduct for a work desk is DYAS Multifine, cutted out into specific dimensions. All veneer plies are 1,5mm thick. In case of customer's request for work desk edges to be flawless without defects (kitchen worktops and tables), it is possible to produce it in a „compact“ version. All veneers plies are without open splits and holes, then. An outstanding feature of the work desk is a compactness and form stability.
